

## NEDERLANDSE KOOIKERHONDJE

*A Breed Standard is the guideline that describes the ideal characteristics, temperament, and appearance of a breed, and ensures that the breed is fit for function, with soundness essential. Breeders and Judges should, at all times, be mindful of features that could be detrimental in any way to the health, welfare, or soundness of this breed.*

Most recent changes to this Standard has an effective date of 31/03/2016

### ORIGIN

The Netherlands.

### UTILISATION

Sporting and companion dog used for duck decoy.

### BRIEF HISTORICAL SUMMARY

In 1942, during the Second World War, the Baroness Van Hardenbroek van Ammerstol began to recreate the Kooikerhondje. She gave a picture of the type of dog she was looking for to a pedlar and asked him to look out for such dogs. At a farm in the province of Friesland, he found the bitch now well known as Tommy. She became the founding bitch of the Kooikerhondje. In 1966 the Raad van Beheer adopted the interim breed and, in 1971, the breed was officially recognised. The Kooikerhondje was and is still used in the duck decoys. His task is to lure ducks into the decoy with his gaily waving tail; he does not hunt the ducks. He calmly moves between the decoy screens in order to provoke the ducks curiosity and lure them further down the decoy pipe where the ducks are captured in a trap. They are either killed for the table or ringed for ornithological research.

### GENERAL APPEARANCE

The Kooikerhondje is a harmoniously built orange-red parti-coloured small sporting dog of almost square body proportions. He moves with his head held high; in action, the well-feathered waving tail is carried level with, or above the topline. The ears have black hair at the tip, the so-called earrings. The dog is presented with a natural, untrimmed coat.

### IMPORTANT PROPORTIONS

- The length of the body from the point of the shoulder (at the scapula/humerus) to the point of the buttocks may be slightly longer than the height at the withers.
- Skull and muzzle are of about equal length.

### BEHAVIOUR / TEMPERAMENT

Lively and agile, self-confident, and with sufficient perseverance and stamina, good natured and alert, however not noisy. The breed is faithful, easy-going, and friendly. Outside the hunting season, the dog is expected to find and kill vermin, hence he needs to be keen, swift, and tough. He is a true sporting dog, being attentive and energetic having a zest for working, and with a cheerful character.

### HEAD

The head is of moderate length, fitting in with the general appearance; clean-cut, with flowing lines.

#### Cranial Region:

**Skull:** Sufficiently broad, moderately rounded.

**Stop:** Seen in profile clearly visible but not too deep.

#### Facial Region:

**Nose:** Black and well-developed.

**Muzzle:** Seen from the side, not too deep and slightly wedge-shaped; seen from above, not tapering too much and well-filled under the eyes.

**Lips:** Preferably well-pigmented, close-fitting, and not overhanging.

**Jaws and teeth:** Scissor bite; complete dentition desirable. Pincer bite accepted but less desirable.

#### **Eyes:**

Almond-shaped, dark brown, with a friendly, alert expression.

#### **Ears:**

Moderately large, set on just above the line from the point of the nose to the corner of the eye. The ears are carried close to the cheeks without a fold. Well-feathered; black hair tips ("earrings") are highly desirable.

### **NECK**

Strongly muscled, of sufficient length, and clean-cut.

### **BODY**

**Topline:** Smooth line from the withers to the tail.

**Back:** Strong and straight, rather short.

**Loin:** Of sufficient length and width, strongly muscled.

**Croup:** Slightly sloping and sufficiently broad; the length of the croup should be 1½ times the width.

**Chest:** Reaching to the elbows with sufficient spring of ribs. Sufficiently developed forechest.

**Underline and belly:** Slight tuck-up towards the loin.

### **TAIL**

Set-on so as to follow the topline of the body, carried level with the topline or almost straight up (gaily). Well-feathered with a white plume. The last vertebra should reach the hock joint.

### **LIMBS**

#### **Forequarters:**

**Shoulder:** Shoulder sufficiently sloping in order to create a flowing line from neck to back.

**Upper arm:** Well-angulated towards shoulder blade that is of equal length.

**Elbow:** Close to the body.

**Forearm:** Straight and parallel, strong bone of sufficient density and length.

**Metacarpus (pastern):** Strong and slightly oblique.

#### **Hindquarters:**

**General appearance:** Well-angulated, straight and parallel, seen from the rear. Strong bone.

**Thigh:** Well-muscled.

**Lower thigh:** Length equal to thigh.

**Hock joint:** Well let down.

### **FEET**

Small, slightly oval, compact with well-knit toes pointing forward.

### **GAIT / MOVEMENT**

Should be flowing and springy, well-extended, with good drive. Limbs parallel.

### **COAT**

Hair of medium length, slightly wavy or straight and close lying. Soft hair. Well-developed undercoat. Front legs should have moderate feathering reaching to the pastern joints. Hind legs should have fairly long feathered breeches; no feathering below the hock joints. The coat on the head, the front part of the legs and the feet should be short. Sufficiently feathered on the underside of the tail. Longer hair on throat and forechest. Earrings (long feathered black hairtips) are highly desirable.

### **COLOUR**

- Distinct patches of clear orange-red colour on pure white.

\* A few small spots on the legs are accepted.

\* The orange-red colour should be predominant.

\* Some black hair intermingling with the orange-red colour and a slight form of ticking are accepted but less desirable.

- **Colouring on the head:** a clearly visible blaze running down to the nose. There should be colouring on the cheeks and around the eyes. A blaze that is too narrow or too wide, or only partly coloured cheeks is less desirable. A black tail ring where the colour changes from orange-red to white is permitted.

## SIZE

### Height at the withers:

**Males:** 40cm (approx. 15½")

**Females:** 38cm (approx. 14½")

Tolerance: 2cm over or 3cm under the ideal heights are permitted.

***N.B.** Male animals should have two apparently normal testicles fully descended into the scrotum. Only functionally and clinically healthy dogs, with breed typical conformation should be used for breeding.*

## FAULTS

Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree and its effect upon the health and welfare of the dog, and on the dog's ability to perform its traditional work.

- Ears too small.
- Ears half-erect, "flying ears".
- Tail that is curled.
- Hackney gait.
- Curly or silky hair.
- Colour that is heavily interspersed with black hairs in the orange-red patches.
- Too much ticking.
- Over maximum size or under minimum size.

### Severe faults:

- Anxious behaviour.
- Distinctly low on legs, out of proportion.
- Wall eye.
- Undershot or overshot bite.
- Tail too short, not reaching hock-joint.
- White colour on ears, partly or completely.
- White hair around eyes, one or both.

### Disqualifying faults:

- Aggressive or overly shy.
- Any dog clearly showing physical or behavioural abnormalities.
- Colour that is black and white or tricolour.
