

RUSSIAN TOY

(LONG HAIRED / SMOOTH HAIRED)

The two varieties of this breed are judged separately and may each be awarded Challenge Certificates and/or FCI-C.A.C.I.B.s® (Certificate d'Aptitude au Championnat International).

A breed standard is the guideline which describes the ideal characteristics, temperament and appearance including the correct colour of a breed and ensures that the breed is fit for function. Absolute soundness is essential. Breeders and judges should at all times be careful to avoid obvious conditions or exaggerations which would be detrimental in any way to the health, welfare or soundness of this breed. If a feature or quality is desirable it should only be present in the right measure. However, if a dog possesses a feature, characteristic or colour described as unacceptable, it must not be rewarded in the show ring.

Most recent changes to this Standard have an effective date of 01/05/2026

ORIGIN

Russia.

UTILISATION

Companion dog

BRIEF HISTORICAL SUMMARY

At the beginning of the 20th century, the English Toy Terrier was one of the most popular toy dogs in Russia. However, in the period 1920 – 1950 the breeding of pure toy terriers was almost stopped and the number of dogs fell to a critical level. Only in the mid-fifties did Russian dog-breeders begin the revival of the breed. Practically all dogs which were used for breeding had no

pedigrees; many of them were not pure blood. The Standard drafted for Toy Terriers significantly differed from that of the English Toy Terrier in many aspects. From this moment, the evolution of the breed in Russia went its own way. On the 12th of October, 1958 two smooth-haired dogs, one of which had slightly longer hair, gave birth to a male dog with a spectacular fringes on ears and limbs. It was decided to keep this feature. The male was mated with a female which also had slightly long hair. Thus the longhaired variety of the Russian Toy appeared. It was called Moscow Longhaired Toy Terrier. A dog breeder from Moscow, Yevgueniya Fominichna Zharova, played an important role in the creation of this breed variant. It was during a long period of development, in an isolated context, along with a specifically conducted selection that a new breed was created: the Russian Toy with two coat varieties: longhaired and smooth-haired.

GENERAL APPEARANCE

A small, elegant longlegged dog, with fine bone and lean muscles. Very harmonic dog of good proportions. Sexual dimorphism only slightly defined.

IMPORTANT PROPORTIONS

The length of the body is equal to the height at withers.

The height at elbows is only slightly more than half of the height at withers.

The chest reaches the elbows.

The length of the muzzle is shorter than the length of the skull.

BEHAVIOUR/TEMPERAMENT

Active, very cheerful, neither cowardly nor aggressive. Always curious of the outer world, strongly devoted to its owner.

HEAD

Small compared to the body. Light, lean; wedge-shaped if viewed from above; occiput is not pronounced.

Cranial Region:

Skull: High but not too wide (width at the level of zygomatic arches does not exceed the depth of the skull), with a slightly rounded forehead. The roundness should be pronounced but not exaggerated.

Stop: Clearly pronounced, of medium depth.

Facial Region:

Nose: Small, well developed with well-open nostrils; black or matching the coat colour.

Muzzle: Lean and pointed, gradually narrowing to the nose; shorter than the skull: from 1/3 up to 2/5 of the head. Straight nasal bridge.

Lips: Thin, lean, tight-fitting and dark or matching the coat colour.

Jaws/Teeth: Scissor bite. Level bite extending to 2 or 3 pairs of incisors is permitted but undesirable. Teeth white, of medium size.

Cheekbones: Flat, only slightly pronounced.

Eyes:

Quite large, rounded, expressive, well apart and looking straight ahead. As dark as possible. Eyelids are dark or matching the coat colour, tightly fitting. The look is self-interested, clever, curious, friendly, and intelligent.

Ears:

Big, thin, set high, erect, shaped as a high isosceles triangle; set slightly upward. In longhaired variety may be slightly directed sideways.

NECK

Long, lean, carried high.

FOREQUARTERS

Shoulders well-developed and sloping. Chest rather deep. Forelegs straight, slender with strong, fine bone. Elbows close to chest.

BODY

Topline: Moderately and gradually sloping from the withers down to the tailset.

Withers: Slightly pronounced.

Back: Strong and straight.

Loin: Short, sufficiently muscled and slightly prominent.

Croup: The croup is sloping at about 15 degree to the horizontal line, of medium width, sufficiently long.

Chest: The chest reaches the elbows; of slightly flat oval, shaped in cross-section.

Underline and belly: Tucked up belly and drawn up flanks, forming a smooth and nicely curved line from the chest to the flanks.

TAIL

Medium length, sickle or sabre, without wring or kinks. Set moderately high. In movement is desirable to be carried neither lower than back level nor lie on the back. Docked tail is permitted; 2 – 4 vertebrae are left.

[*refer note below]

LIMBS

Forequarters:

General appearance: General appearance: Seen from the front, the front legs are straight and parallel. Set under the body when viewed from the side. The height at elbows is only slightly more than half of the height at withers.

Shoulder: The shoulder blades are moderately long and not too sloping.

Upper arm: The length of upper arm is approximately equal to the length of shoulder blade; forms an angle of 100-110 degrees with the shoulder.

Elbow: Set rearward.

Forearm: Long, straight.

Carpus (Wrist): Lean.

Metacarpus (Pastern): Straight when viewed from the front. Almost vertical when viewed from the side

Hindquarters:

General appearance: Seen from the rear, the hind legs are straight and parallel, standing a little bit wider than the forelegs. Viewed from the side set slightly rearward. Stifles and hocks are sufficiently bent, in balance with the forelegs angulation.

Upper thigh: Moderately long; muscles are lean and developed.

Lower thigh: Of approximately same length as the upper thighs.

Hock: Of moderate angulation.

Metatarsus (Rear pastern): Perpendicular to the ground and parallel to each other

FEET

Small, oval, turning neither in nor out. Toes well-knit and arched. Pads are springy. Nails and pads are black or matching the coat colour. Hind feet: The paws are arched and well-closed, a little bit narrower than forefeet; toes are close-cupped, not turned in or out. Nails and pads are black or matching the coat colour.

GAIT / MOVEMENT

Easy, straightforward, light, energetic, moderately reach. The topline is straight; no noticeable change in the topline when moving; somewhat high in withers is permissible. Head proudly held high, tail carried high enough.

SKIN

Thin and tight-fitting.

COAT

Hair:

There are two varieties for the breed: smooth-haired and longhaired.

- Smooth-haired: Short, close-lying, shiny hair, without undercoat or bald patches.
- Long-haired: Body and neck are covered with moderately long (3-5 cm), straight or slightly wavy hair, close-lying. Hair on the head and on the front part of limbs is short and close-lying. Distinct feathers on rear side of limbs and the tail. Ears are covered with thick, long hair forming a fringe. In adult dogs the fringe, should completely hide the outer edges and tips of the ears. Body hair should not be tousled or fluffy

Colour:

- Black and tan; brown and tan; blue and tan; lilac and tan; red with black, red with blue; red with brown, red with lilac; red; fawn; cream.
- The colour of the nose matches the main hair colour.

SIZE AND WEIGHT

Height at withers:

Males and females: 22cm – 27cm (approx. 8" – 10.6").

Preferable height: 25 cm (approx. 9.8")

Weight:

Males and females: up to 3 kg.

Preferable weight: 2.3 kg

N.B. Male animals should have two apparently normal testicles fully descended into the scrotum. Only functionally and clinically healthy dogs, with breed typical conformation should be used for breeding.

***Regardless of the provisions of the current KUSA-adopted standard, docked or formerly docked breeds may be shown at all FCI- and KUSA-licensed shows in South Africa, whether their tails are docked or natural. Under no circumstances are Judges permitted to discriminate against exhibits on the grounds of docked or natural tails, and equal consideration for awards must be given to either.**

FAULTS

Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree and its effect upon the health and welfare of the dog, and on the dog's ability to perform its traditional work.

- Timid behaviour.
- Height less than 22 cm; height more than 27 cm.
- Longbodied dog; too much arched loin; steeply sloping croup.
- Missing 1 or 2 incisors in the upper and/or lower jaw.
- Semi-erect ears in the long-haired breed variation if not caused by heavy and too thick ear hair.
- Soft ears in the smooth-haired dogs.
- Weak lower jaw.
- Piked or heavy muzzle; dishfaced or downfaced
- Inverted elbows, toes-out.
- Straight in front and rear.
- Angulations of stifles and hocks excessively pronounced.
- Low set tail, curled tail, spirally twisted tail, tail laying on the back.
- Minor bald patches in smooth-haired dogs.
- Too long, lose or slightly waved body hair in longhaired dogs; tousled or fluffy hair; the absence of

- ornamental hair on the tail.
- Small white spots on chest and toes.
- Tan markings too large or with darkened markings.

Disqualifying faults:

- Aggressive or overly shy dogs.
- Any dog clearly showing physical or behavioural abnormalities.
- Overshot, level bite extending to the whole pairs of incisors, undershot. Wry mouth; absence of any canine; absence of more than 2 incisors in either jaw.
- Lower jaw canines thrust against gums or roof of the upper jaw.
- Tongue visible constantly when mouth is closed.
- Open fontanel in dogs over 9 months.
- Short legged dogs.
- Overdeveloped and massive chest.
- Semi-pricked ears in smooth-haired dogs.
- Dropped ears in long-haired dogs.
- In smooth-haired dogs: numerous bald patches (more than 25 %); very soft, tousled, loose body hair; too long hair with pronounced feathering on limbs and tail; trimmed coat.
- In long-haired dogs: absence of fringes on ears and, presence of curly hair. , trimmed coat on the body; curly coat; semipricked ears without fringes.
- Wringed or kinked tail.
- White spots on the head, on throat, above metacarpus; (pasterns) / metatarsus (rear pastern); large white patches on chest presence of brindle markings; any colour is not specified in the standard.
- Size over 29 cm or less 18 cm.
- Weight more than 3 kg or less than 1.5 kg
