

FINNISH SPITZ

A breed standard is the guideline which describes the ideal characteristics, temperament and appearance including the correct colour of a breed and ensures that the breed is fit for function. Absolute soundness is essential. Breeders and judges should at all times be careful to avoid obvious conditions or exaggerations which would be detrimental in any way to the health, welfare or soundness of this breed. If a feature or quality is desirable it should only be present in the right measure. However, if a dog possesses a feature, characteristic or colour described as unacceptable, it must not be rewarded in the show ring.

Most recent changes to this Standard have an effective date of 01/01/2016

ORIGIN

Finland.

UTILISATION

A hunting dog mainly for forest game birds, also predatory small game, waterfowl, and elk. Eager hunter; rather independent, yet works co-operatively to game, marking game by barking.

BRIEF HISTORICAL SUMMARY

It is known that already hundreds of years ago, dogs of this type were used for all game hunting over the whole country. Originally, the main goal was to develop a dog that barked well at game up in trees and was also beautiful. When the register of the breed started in the 1890s, individuals similar in type and hunting purpose were found mainly in the eastern and northern parts of the country. The first breed standard was established in 1892. The first breed show was held the same year and the first bird-hunting trial in 1897. Today the breed is very common in both Finland and Sweden. It has been developed from pure natural stock and is an essential part of the Finnish culture. The Finnish Spitz was named as the National Dog of Finland in 1979. According to the agreement between the Finnish Kennel Club and the Russian Cynological Federation, that was signed in 2006, the Karelian-Finnish Laika and the Finnish Spitz were combined as one breed under the breed standard of the Finnish Spitz.

GENERAL APPEARANCE

Smaller than medium-sized, almost square. In conformation, lean, firm, and he carries himself well.

IMPORTANT PROPORTIONS

- The length of the body is the same as the height at withers.
- The depth of the chest is slightly less than half of the height at withers.
- The ratio between the muzzle and skull is approximately 3 : 4.
- The skull is a little broader than long, the breadth is the same as the depth.

BEHAVIOUR / TEMPERAMENT

Lively, vigorous, brave, and determined. Might be a little reserved towards strangers, but never vicious.

HEAD

Cranial Region:

Skull: Viewed from above, egg-shaped, broadening gradually towards the ears. Skull is broadest between the ears. Viewed from the front and in profile the skull is slightly convex. The upper axes of the skull and muzzle are almost parallel. The frontal furrow is very shallow.

Superciliary arches: The superciliary ridges and the occiput are slightly visible.

Stop: Not very pronounced, the angle between the nasal bridge and the skull is clearly marked.

Facial Region:

Nose: Rather small, jet-black.

Muzzle: Viewed from above and in profile, evenly tapering, rather narrow, not fleshy. The nasal bridge is straight.

Lips: Tight, rather thin and close fitting. Good pigmentation.

Cheeks: The zygomatic arches are slightly emphasised.

Jaws and teeth: The jaws are strong. The lower jaw is clearly defined. The teeth are well-developed and symmetrical; 42 teeth, according to the dentition formula. Close-fitting scissor bite.

Eyes:

Medium-sized, almond-shaped, slightly oblique, and preferably dark. The expression is lively and alert.

Ears:

Set rather high, always erect. Rather small-sized, pointed, very mobile and covered with fine hair.

NECK

Muscular; it appears to be rather short in males due to the thick ruff, of medium length in bitches. Throat without dewlap.

BODY

Withers: Clearly defined, especially in males.

Back: Rather short, level, and muscular.

Loin: Short and muscular.

Croup: Of medium length, well-developed, and slightly sloping.

Chest: Long, reaching almost to the elbows, not very broad. The ribs are slightly sprung; the forechest normally developed, not very prominent.

Underline and belly: Slightly tucked-up.

TAIL

Curved forward from the set-on tightly along the back, then hanging down and slightly tilted towards the rear. Pressed against the thigh, the tip of the tail to reach down to the middle of the thigh. When straightened, reaches approximately down to the hocks.

LIMBS

Forequarters:

General appearance: Viewed from the front, straight and parallel. The bone is of moderate strength. The upper arm is a little shorter than the shoulder blade and the forearm.

Shoulder: Firm, very mobile, and not very oblique.

Upper arm: A little shorter than the shoulder blade. Slightly sloping and strong.

Elbow: Placed in front of a vertical line drawn from the point of shoulder; pointing straight backwards.

Forearm: Moderately strong, vertical.

Metacarpus (pastern): Of moderate length, only slightly sloping and flexible.

Hindquarters:

General appearance: Strong, viewed from behind, straight and parallel, moderate angulation. The bone is of moderate strength. The thigh is slightly longer than the lower thigh.

Upper thigh: Of medium length, rather broad with well-developed muscles.

Stifle (knee): Pointed forward, moderate angulation.

Lower thigh: Muscular.

Hock joint: Set moderately low, moderate angulation.

Metatarsus (rear pastern): Rather short, strong, and vertical.

FEET

Forefeet: Roundish, like cat-feet. Toes tight and well-arched. Pads elastic, always black, the sides covered with dense hair.

Hind feet: A little longer than the forefeet, otherwise similar.

GAIT / MOVEMENT

Light, effortless, and covering the ground. Changes easily from trot to gallop, the latter being the most natural style of movement. The legs move parallel. When rushing after game, explosively fast gallop.

SKIN

Tight overall, without wrinkles.

COAT

Hair moderately long on the body, stand-off coat, semi or fully, stiffer stand-off on the neck, shoulders, and back. On the head and the legs (except the back of the hindquarters), coat is short and close-lying. The stiff hair on the shoulders, especially in males, is noticeably longer and coarser. On the trousers and on the tail, the hair is long and dense. The undercoat is short, soft, dense, and light in colour.

COLOUR

- The hair on the back is bright red or golden red, preferably a bright colour.
- A lighter shade inside the ears, on cheeks, throat, and chest, belly, inside the legs, back of the thighs, and on the tail.

* A small white spot on the chest and small white markings on the feet are permitted.

SIZE

Height at withers:

Males: 44cm – 50cm (approx. 17" – 19½"). Ideal height: 47cm (approx. 18½").

Females: 39cm – 45cm (approx. 15" – 17½"). Ideal height: 42cm (approx. 16½").

***N.B.** Male animals should have two apparently normal testicles fully descended into the scrotum. Only functionally and clinically healthy dogs, with breed typical conformation should be used for breeding.*

FAULTS

Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree and its effect upon the health and welfare of the dog, and on the dog's ability to perform its traditional work.

- Missing teeth (1 or 2 missing teeth excluding PM1 and M3).

Disqualifying faults:

- Aggressive or overly shy dogs.
- Any dog clearly showing physical or behavioural abnormalities.
- Other than erect ears.
- Other than black nose.
- Eyes bright yellow or wall eye.
- Overshot or undershot mouth.
- Kinked tail.
- Large white markings on the chest and/or a white sock.
- Colours differing severely from the basic colour.
- Wavy or curled coat.
- Height other than given in the standard.
- Several missing teeth (three or more).
